# Scanned. Printed. Delivered.

Get started right away even without a 3D printer! The DentaMile Print Service supplements our digital product range and enables fast entry into the digital workflow.

**It's as simple as that!**

## Create patient case

Simply register and log in to DentaMile connect. You can then create a patient case in the "File Transfer" area. Needless to say, that only you will be able to see the patient data. This means that all we are able to see is the automatically generated order number.

## Create and upload design

After creating the case, you can upload the desired 3D design data in STL format. You can find further required specifications in the relevant product area. A patient case can be assigned several print files.

## Order print from the DentaMile Print Service

If everything meets your requirements, all you have to do is send off the order, and then you can sit back and relax - we'll take over from here.

## Data check, production and quality check

We check the data and print your 3D model.  
We pay special attention to quality and check every single object we produce.

## Ready for dispatch within 24 h

Can you hear the doorbell ringing already? Generally speaking, your completed orders will already be on their way to you the following day.

**Conclusion:** Affordable, time efficient and high quality. An overall fantastic product.

## Our quality promises:

DMG is an ISO-certified company with 60 years of experience in the dental sector, which is reflected by our quality solutions. We always carefully monitor and validate our digital workflows by taking into account all of the components involved in our internal Digital Application Centre.

# Our product portfolio
