LICENCE OPTIONS

3D printing to suit your needs: the flexible DentaMile connect licensing options

Printing your own 3D models? Networking with a dentist or a partner laboratory? Just scanning? Or designing digital models as well?

No matter how, you too can get involved in the digital workflow. Our award-winning DentaMile connect software's flexible licence model offers you an outstanding range of options. You decide what you'd like to do – and what licence package is the right one for you.

What 3D capabilities do you need?

DentaMile connect's »Creator« or »Creator Plus« licence options allow you to create patient data, upload STL files, and then submit the cases for design and printing.

The »Designer« option enables users to independently design all the DentaMile indications (e.g. splints) too.

If you'd like to work your way through all the steps in the digital workflow, including 3D printing and post-processing, then the »Producer« licence option is the perfect product for you.

All the options allow you to work together with dentists or partner laboratories as part of a network. The DentaMile connect software is cloud-based and doesn't have any special system requirements. So you can get stuck right into 3D printing. All you need is a standard computer and an internet connection.

Dental 3D printing is made easy. With DentaMile connect.

You will find a detailed overview of the licence options and what services they include on the back of this flyer.

Your options with DentaMile connect at a glance

Services included	Creator	Creator Plus	Designer	Producer
Creating patient data and uploading STL files	✓	✓	✓	✓
Design workflow (including virtual articulator)	✗	✗	✓	✓
